Generated Test Cases

12 test case(s)

Model: openai/gpt-oss-120b

Tokens: 2733

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
▶ TC-001	Display dashboard for consultant with valid access	Positive	Dashboard loads within 2 seconds, showing the correct list of assigned inpatients and all related visualizations (e.g., charts) reflecting the data accurately
▶ TC-002	Dashboard load time meets performance requirement	Non-Functional	Dashboard fully renders in ≤ 2 seconds on a standard broadband connection
▶ TC-003	Handle empty inpatient dataset	Edge	Dashboard displays an empty-state message
▶ TC-004	Display large inpatient dataset without degradation	Edge	Dashboard page loads within ≤ 5 seconds, and visualizations correctly aggregate the large dataset
▶ TC-005	Prevent unauthorized role from accessing My Inpatients dashboard	Authorization	Access is denied – user is redirected to an error page or shown a permission-denied message, and no inpatient data is displayed
▶ TC-006	Session expiration redirects to login	Negative	User is redirected to the login screen with a session-timeout notification; dashboard data is not shown
▶ TC-007	Graceful handling of corrupted inpatient records	Negative	Dashboard loads without crashing, logs the error internally, and displays all valid records while omitting or flagging the corrupted entry
▶ TC-008	Filter inpatients by ward	Positive	List updates to show only inpatients belonging to the selected ward and all related visualizations reflect the filtered subset

▶ TC-009	Export inpatient list to CSV	Positive	A CSV file is downloaded containing exactly the rows displayed in the list, with correct headers and data formatting
▶ TC-010	Accessibility compliance of My Inpatients dashboard	Non-Functional	All controls have appropriate ARIA labels, the screen reader announces each element correctly, and no accessibility violations are detected
▶ TC-011	Protect against SQL injection via URL parameters	Negative	Application sanitizes the input, returns either a safe result set or an error message without exposing data from other wards; no SQL error is shown
▶ TC-012	Cross-browser rendering consistency	Non-Functional	UI renders consistently across all browsers with no missing elements, functional filters, and correctly displayed visualizations
▶ TC-012	Cross-browser rendering consistency	Non-Functional	UI renders consistently across all browsers with no missing elements, functional filters, and correctly displayed visualizations

Generated Test Cases

12 test case(s)

Model: openai/gpt-oss-120b

Tokens: 2198

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
TC-001	Nurse successfully raises a patient activity request	Positive	The request is saved, a confirmation message is displayed, and the new request appears in the 'My Requests' tracking list with status 'Pending'.

▶ TC-009	Negative: Submit duplicate request for the same activity within a short interval	Negative	The system detects duplicate submission and displays a warning message, preventing the second identical request.
▶ TC-010	Non-Functional: Verify request submission audit log entry	Non-Functional	An audit log entry exists with timestamp, nurse user ID, patient ID, and request details, confirming traceability.
▶ TC-011	Edge case: Network interruption during request submission	Edge	The system shows a retry prompt; upon reconnection, the request is submitted successfully or an appropriate error is displayed without data loss.
▶ TC-012	Performance: Load time of Ward Management page for nurse	Non-Functional	The Ward Management page loads within 3 seconds on a standard broadband connection.
